Syncier

Marketplace

API Ecosystem
BAT Bern 25.02.2022

Agenda

- Intro Syncier Marketplace
- Why API economy?
- How we started: Syncier API Marketplace for insurance industry
- Our learnings from working with large insurances in Europe
  - Example Project timeline with focus on API Business Operation
  - Key Takeaways
- The result: Apinity – Your own SaaS platform for API Business Operations
- Next steps of the journey - Apinity: Join the tryout
- Question and Discussion

Founded 2018

- Shareholders: Allianz & Microsoft

> 350 Employees | 40 in API Marketplace Unit

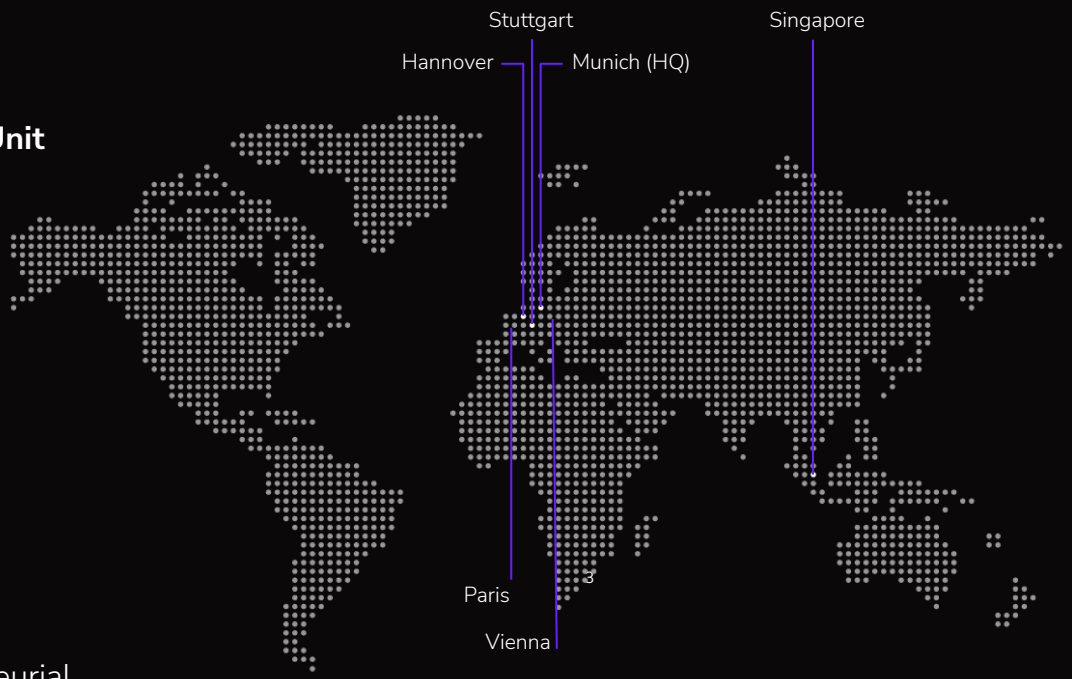
- engineering, insurance and transformation specialists

Six international locations

- Munich (HQ)
- Stuttgart
- Hannover
- Vienna
- Paris
- Singapore

DNA

- Open ecosystem, creative, entrepreneurial



The transformation of the insurance industry has started.

→ Fast emerging consumer trends
→ New digital competitors
→ Shortage of skilled developers

Leveraging the API Ecosystem is one of the key aspects to thrive!

What we want to achieve with API management - the API ecosystem

New business models

- scalable business models based on APIs
- new sales channels
- unbundling of large solutions

New customers and partners

- developers are customers and create additional value based on existing products
- business personas have more and more stakes at APIs

API Ecosystem

Governance and efficiency

- optimally using external services to streamline internal resources
- speed up time-to-market
- defining and monitoring IT-security standards

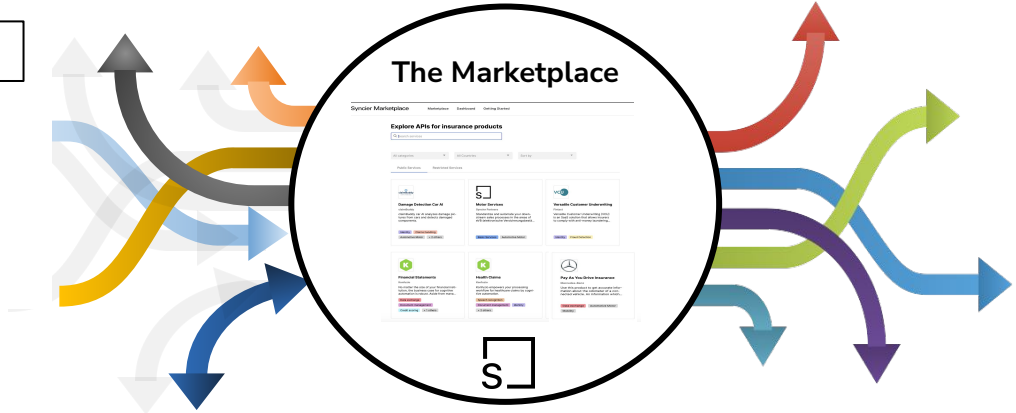
Overcoming new challenges

- reliability
- performance
- self-service for developer customers
- monetizing APIs
- simple contracting and SLAs

API Ecosystem with Syncier Marketplace - open platform where the insurance industry can exchange and manage API services.

Providers

- IT Providers, Insurtechs, Insurances
- API-based with insurance-focus
- Curated and selected 3rd party services
- Custom-built, unique services for insurers



Consumers

- Insurances
- Partners of insurance carriers: insurtechs, brokers and financial services companies

Marketplace Key Value Add

1. **Transparency** with open service and price catalogue serving as "one-stop-shop" for insurance services
2. **Flexible Pricing and Contracting** with custom price plans
3. **Developer-friendly** self service integration via full technical API details, endpoint provisioning and service bundling
4. **Service Management** via performance and user management, billing, metering and more

Typical API implementation projects (we have seen) at two large German insurance companies

API Project

API IT Operations

Gather requirements & Kick Off

- Gather requirements within the company
- Include stakeholders
- Create initial project plan and budget forecast
- Architectural blueprint

>6 months

API Management Tool selection

- RFP and vendor selection
- Define Interfaces to existing IT landscape

Technical project

- Create/Migrate internal APIs to new APIM solution
- Implement of guidelines and best practices for APIs, Security, versioning and more

1 year

API Business Operations

Publish APIs

- Publish APIs from APIM
- Start onboarding developers
- Implement Business Processes around API Productization and start monetization
- Use Marketplace as internal & external developer portal

Start to live the API economy

Our perception: Long project time with increasing risk and gap. Companies struggle more the closer it comes to API Business Operations.

Key Learnings - where we see improvement potential:

- **API Productization:** Treat APIs as full products of your company
- **Involvement:** Involve the relevant business personas
- **Processes & Culture:** General mindset and conditions for API economy must be in place (supported by senior management)
- **Start Small and Iterate:** don’t try to do everything perfect and “fail” as soon as possible
- **API Design:** Start with/Slice a very simple APIs, put the effort into extensive documentation and testing

apinity

Introducing Syncier Apinity

- **A SaaS platform** that builds on top of existing strategies and allows to leapfrog from strategy to execution
- **Out-of-the-Box Ecosystem** with API catalog, subscription management, traffic routing, monetization and analytics to leverage API Business Operations

Publish
a centralized catalogue with all APIs

Collaborate
internally, with partners and your developer community

Scale
up your traffic, revenue, security and customer network

- API-based

apinity

Our Solution

- One place for all APIs:
  - Internal APIs
  - APIs you offer to external Partners
  - APIs you consumer from external provider/partners
- Technical basics:
  - SaaS with low entry barriers and full multitenancy
  - Customizable branding and configuration
  - Works standalone or next to existing API infrastructure
  - Cloud based – Private Cloud Appliance coming soon

Features (Publishing)

- Portal Management
  - Custom Branding
  - Configurable SSO and access
- Publishing
  - Product documentation and API setup
  - Open API 2.0 & 3.0
  - Granular visibility and access mngmt
  - Optional APIM integration (CI/CD)
- Subscription management (for publishers)
  - Manage subscription and contact consumer
- Business Development
  - Communication between publishers and developers
  - Flexible pricing options for APIs
- Monetization
  - Soft / Hard Limits + Rate Limiting
  - Transactions based on API endpoints/HTTP methods
  - Billing Reports
- Analytics
  - Business related KPIs for API consumption, latency, errors and more

Let´s say it clearly: A Headline is never longer than 2 rows and should just explain in simple words what your service is about. 3 Lines, 150 max Characters.

View Supported Countries

100-of-the-art AI-powered solution for the highly reliable verification of your customers' ID more.

Apart from counting words and characters, our online editor can help you to improve word choice and writing style, and, optionally, help you to detect grammar mistakes and plagiarism. To check word count, simply place your cursor into the text box above and start typing. You'll see the number: 5000

Designed for enterprise needs and a two lined headline 56!

style, and, optionally, help you to detect grammar mistakes and plagiarism. To check word count, simply place your cursor into the text box above and start typing. You'll see the number: Twohundred!!

Very short Copy. One line. 28

Apart from counting words and characters, our online editor can help you to improve word choice and writing style, and, optionally, help you to detect grammar mistakes and plagiarism. To check word count, simply place your cursor into the text box above and start typing. You'll see the number: 200

Unt qui ipsame rera non prae. Fic tent omniet ium quod mossus quam est a culpa doluptatem. Itasimi Iiaccum nus et, in repro. So 200 Characters should fit into this area. long-enough for a intro!

Apart from counting words and characters, our online editor can help you to improve word choice and writing style, and, optionally, help you to detect grammar mistakes and plagiarism. To check word count, simply place your cursor into the text box above and start typing. You'll see the number.
