JAP Specs

Abgeleitet durch Richtlinien, Weisungen, und Konzepte

Security	SCA	SAST	DAST	License Scanning	Secret Detection	Security Logs	…
Delivery Pipeline	Pipeline as Code	SBOM	CDC	Pipeline Events	Provenance	SLSA 2	…
Observability	Logging	Metrics	Distributed Tracing	Cont. Propagation	Availability	Liveness / Readiness	…
API Integration	SSO	RBAC	Security Headers	CORS	Cloud ←→ OnPrem	Internal / external	…
Persistency	Relational DB	NoSQL	Blob	Delta Lake	DB Version Control	Backup	…
Architecture	Naming	Versioning	Lifecycle	Translation	Feature Toggle	Time Travel	…
Messaging	Info Objects	Commands	TX Outbox	Events	Schema	BASE Transactions	….

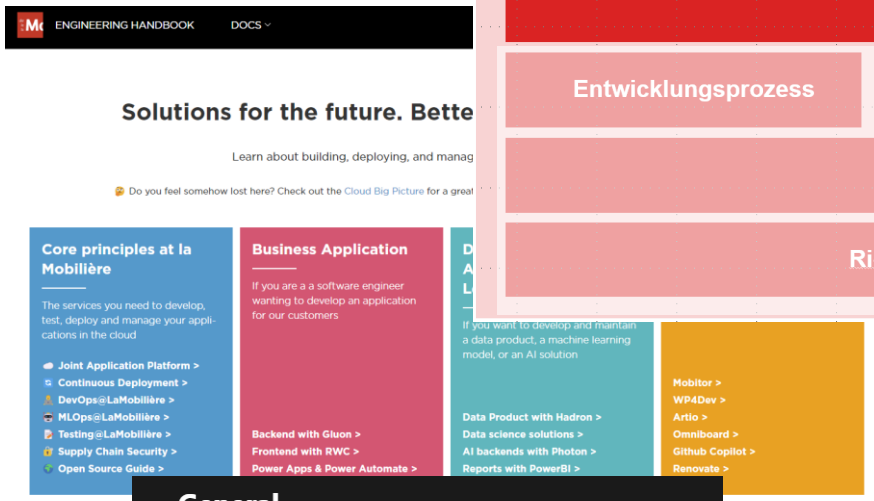
Basis Services

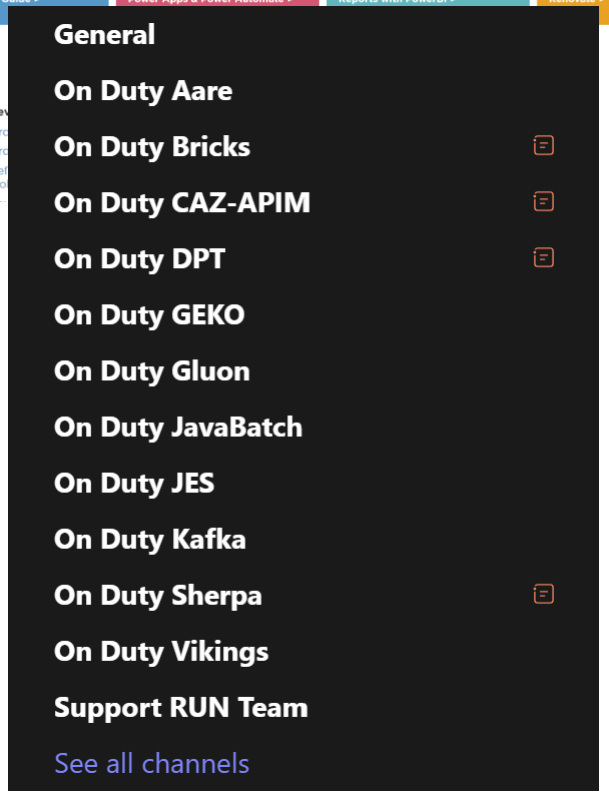
Observability	Delivery Plattform	Landing Zone
SSO / API	Permissions / Config	Traceability

Enablement und Support

- Doku mit Engineering Handbook
  - Das EHB beinhaltet alle Doku für unsere Kunden
  - AskTheEHB

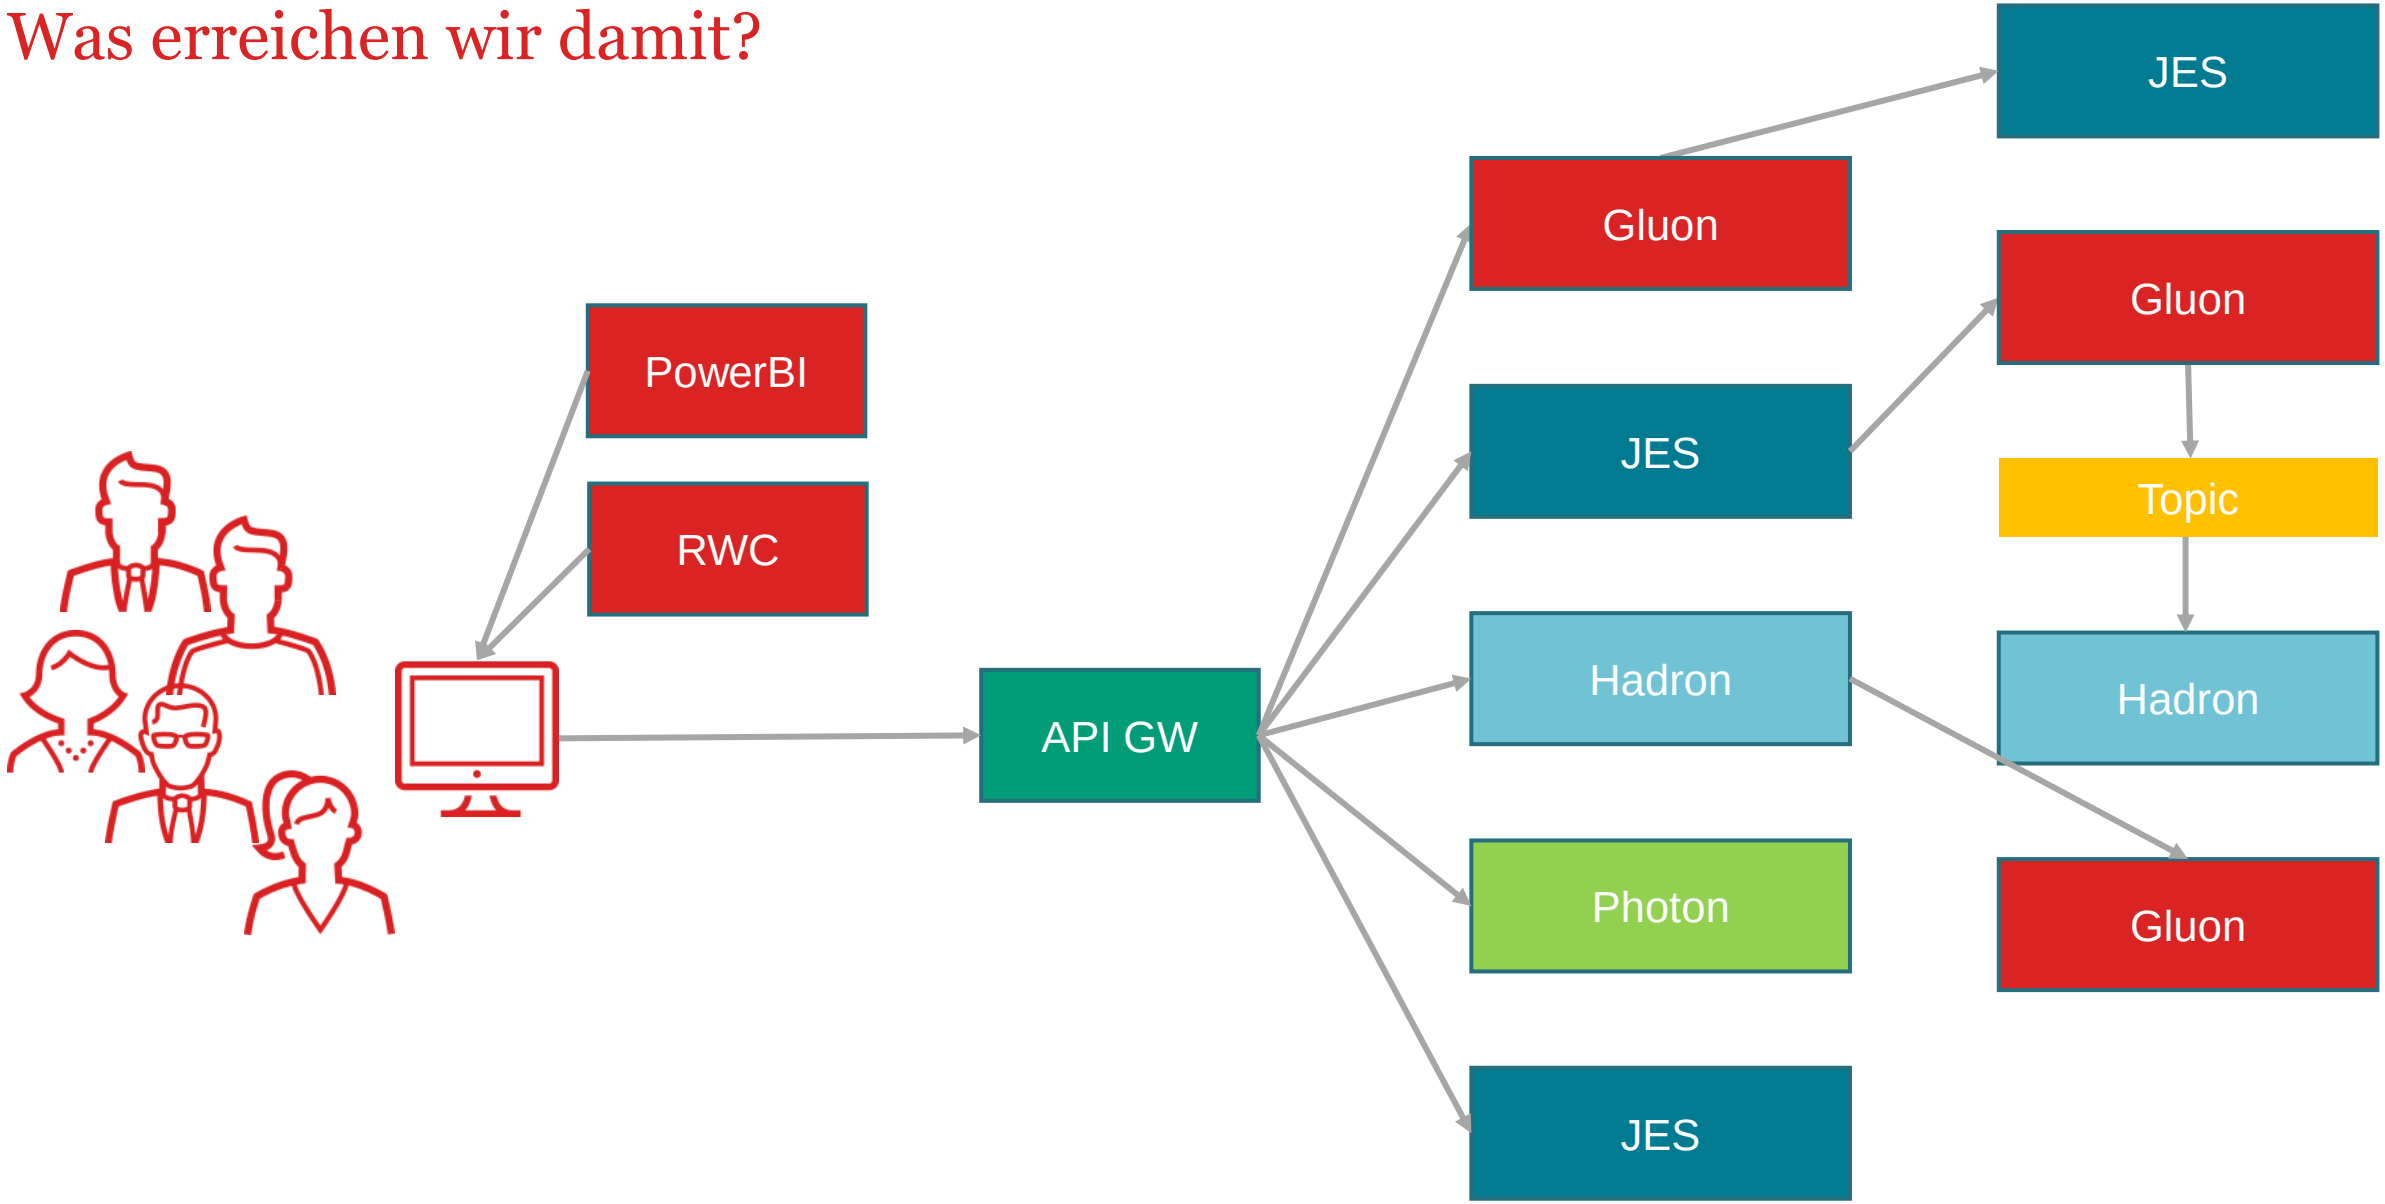
- Ambassador Programm
  - Botschafter kennen die Cloud besser als andere
  - Botschafter sind Multiplikatoren von Wissen und Neuigkeiten



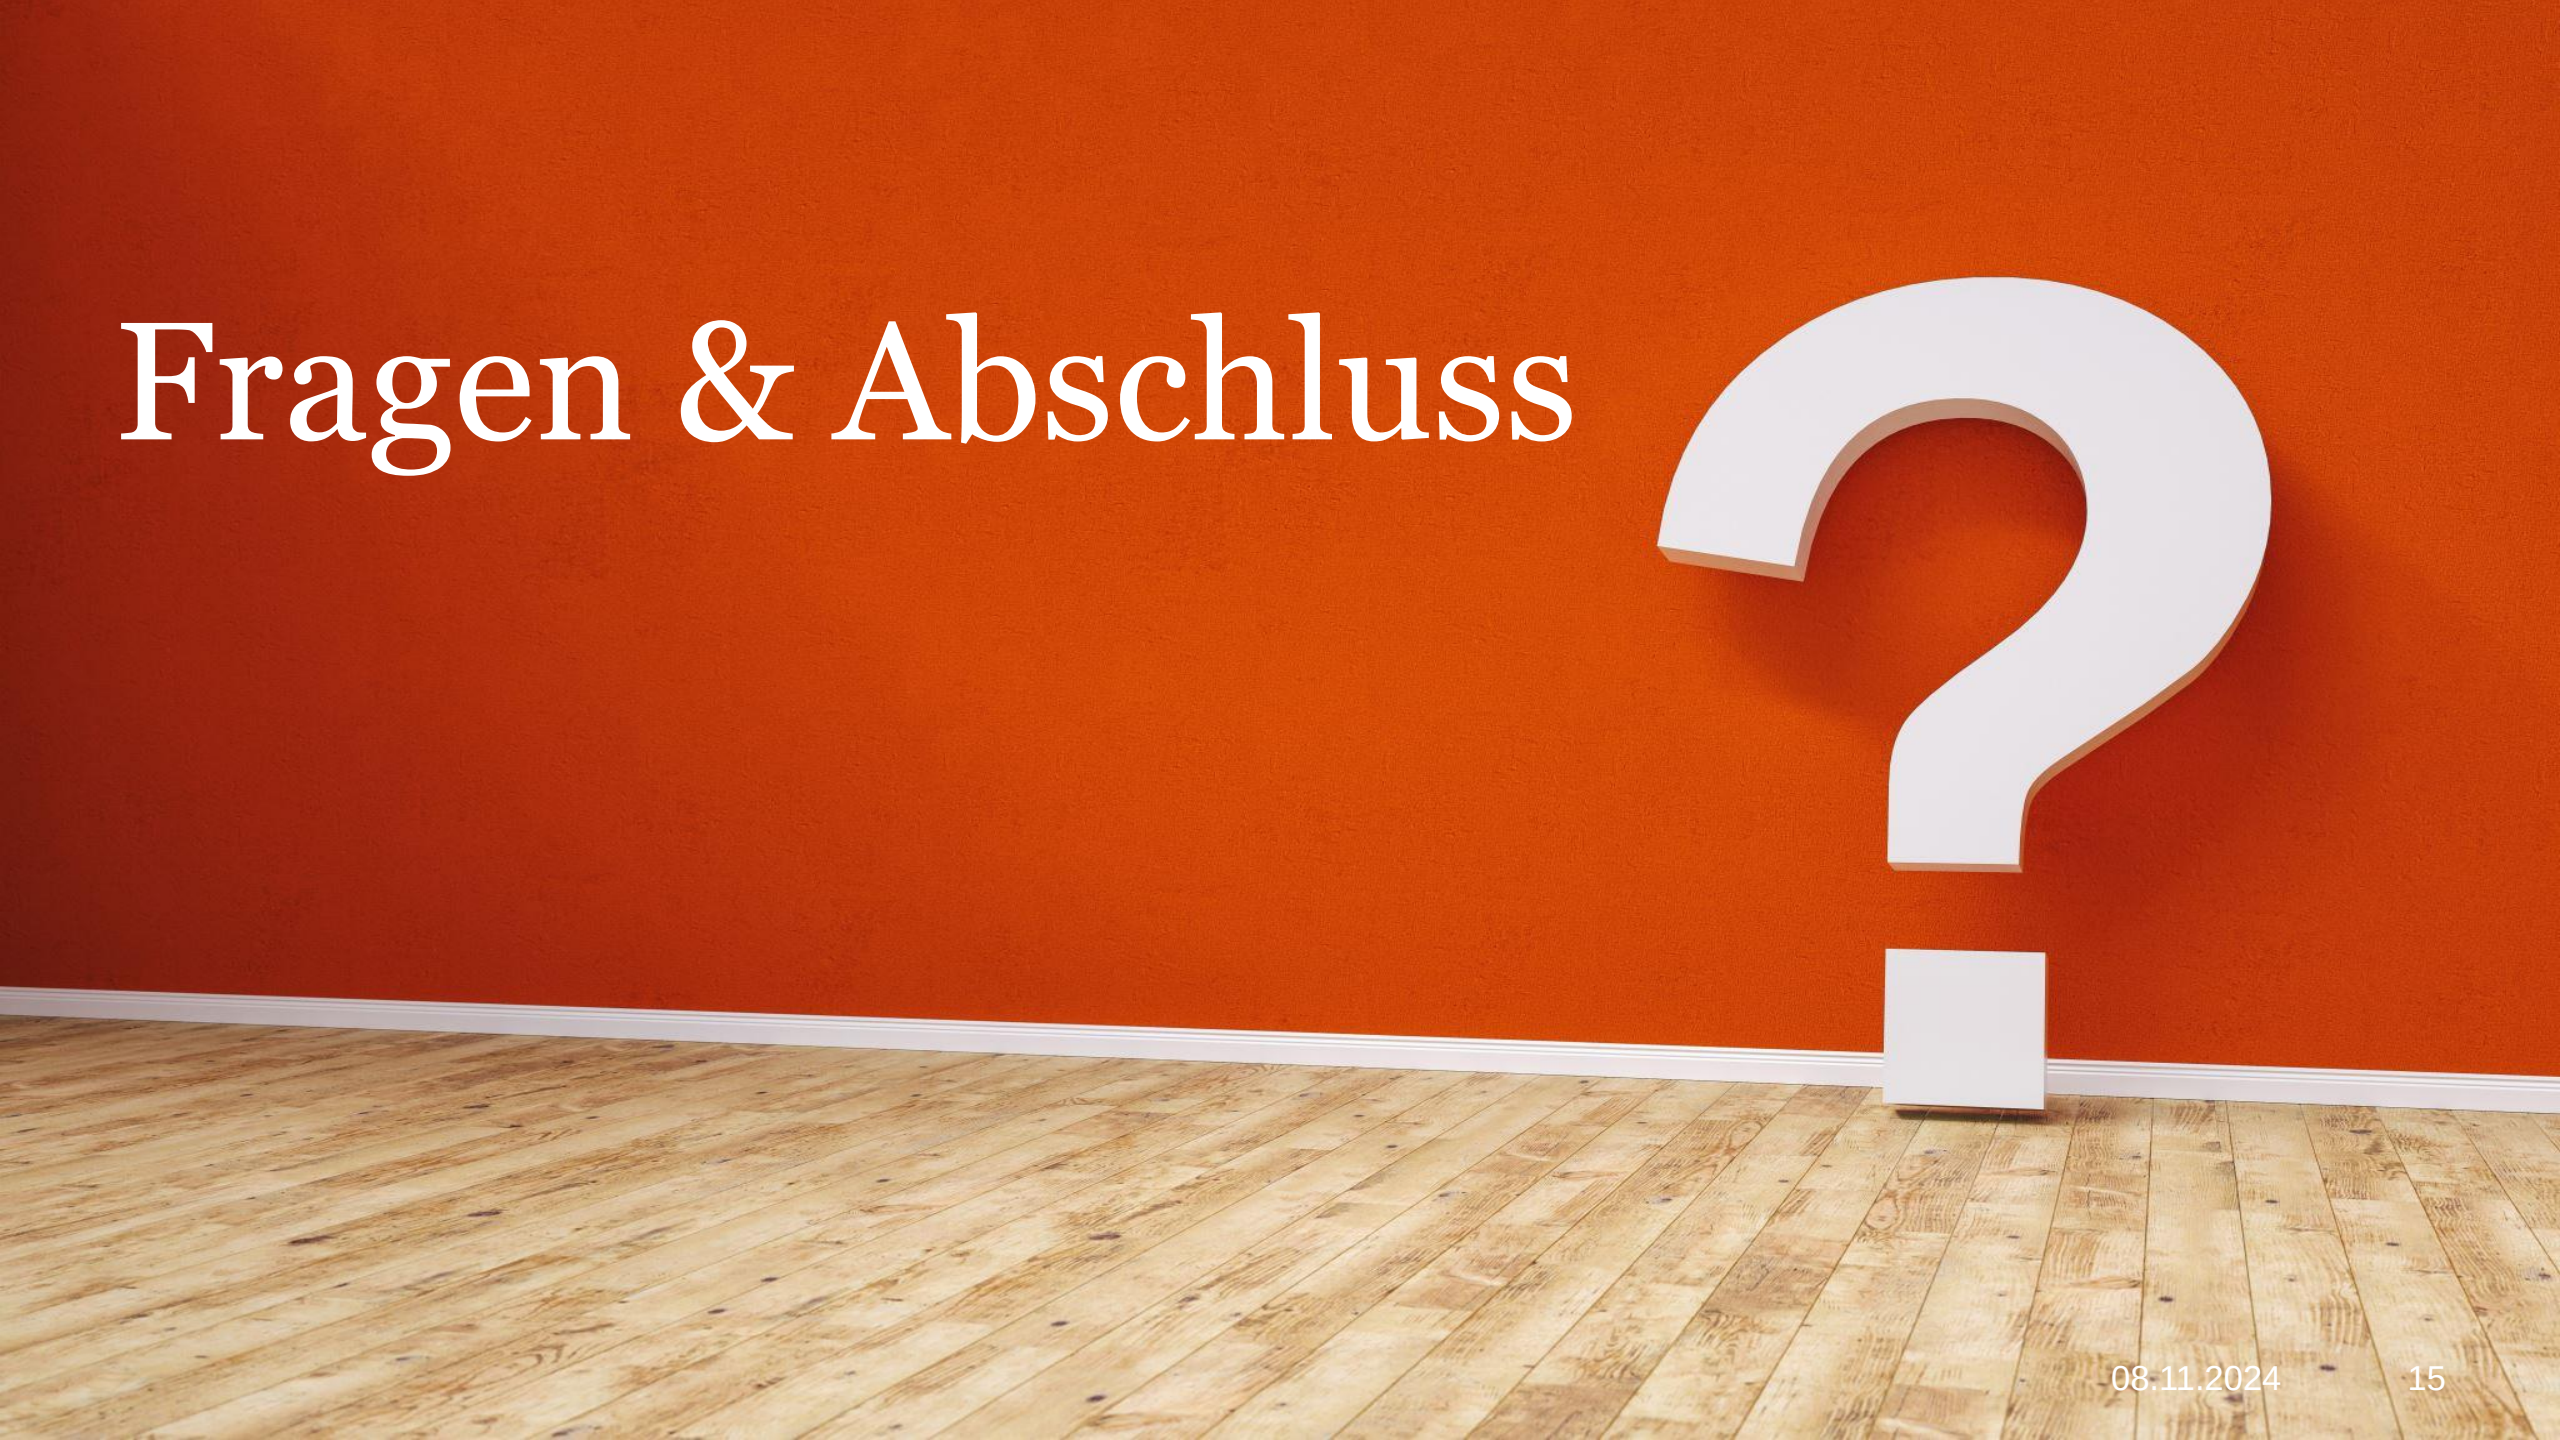


Die Essenz der Joint Application Plattform

Was erreichen wir damit?



Fragen & Abschluss



Anhang

Lessons Learned

- Ask the (right) customer
- Best of breed is not alwyas most efficient, integration is key
- High level services for the win
- Collaboration with CISO / Security Architecture
- Flexibility vs. Standardization
- A common story comes together with standards' definition and mindset alignment
- New quality standard needs adjusting/learning time
- *asCode enables working based on facts though it might be abused
- Transparency is base, zero-trust elaborates on top of it
